

Vault CP&C 22R2 Release Impact Assessment

The Release Impact Assessment (RIA) documents the new capabilities introduced in Vault Consumer Products & Chemical (CP&C) applications in 22R2 that may affect a customer's Vault. We release a version of the RIA in advance of the general release. The CP&C Validation Impact Assessment, which contains validation information for new features in 22R2, will be available in your VeevaDocs Vault by July 15th. Refer to the Enablement and Default Impact for each feature to determine the visibility and configuration requirements. On July 5th, the [22R2 Release Notes](#) will be available. Refer to the release notes for additional details about each feature and data model changes in your Vault. Refer to the [Vault 22R2 Release Impact Assessment](#) for validation information for the Vault Platform.

Revision Date: 05 Jul 2022

This feature list is subject to change prior to the 22R2 release. All changes after initial publication are listed in the Change Log. Updates will stop after August 5, 2022.

Feature:	Name of the feature introduced in 22R2
GxP Risk:	GxP risk analysis takes into account data integrity, security, and confidentiality assuming the feature is turned on (either automatically or via configuration). Veeva performs validation testing on all High and Medium GxP risk items.
<i>High</i>	May affect security, patient confidentiality, application areas that support GxP functions (audit trails, eSignature, etc.) or other ERES controls data
<i>Medium</i>	May affect core application functions (workflows, revision history, etc.)
<i>Low</i>	May affect metadata/notifications
<i>N/A</i>	The feature is a minor UI enhancement and not a functional change. The feature has no validation impact.
Enablement Setting:	Indicates whether the feature is available automatically, requires configuration by an Admin (an Admin area checkbox or a more complex setup), or must be enabled by contacting Veeva Support. Note that in some cases, an Auto-on feature is dependent on another feature that must be enabled or configured. In other cases, individual users (not Admins) need to perform some setup, for example, with new Reporting capabilities that require creation of a new report.
Default Impact:	Impact to business users and processes at Day 1 if no configuration occurs
<i>Visible to All Users</i>	Automatically on and visible to both Admins and end users
<i>Visible to Admins Only</i>	Only visible to Admins, or it requires configuration by an Admin before it is available to end users
<i>None</i>	Not visible in Vault unless enabled by Support

CP&C	Application	Feature Name	GxP Risk	Enablement	Default Impact	Description
	QualityOne Mobile	QualityOne Mobile for Android	High	Configuration	Visible to Admins Only	This feature allows QualityOne Mobile users to log HSE Incidents directly from their Android device.
	QualityOne	Application Security for Inspection Sample Test Result (ISTR) High Volume Object	High	Configuration	Visible to Admins Only	This feature replaces DAC's record-level security with a compatible application security to the ISTR object.
	QualityOne	External Collaboration Management on NCR, Audit, Change Control & Inspection	High	Configuration	Visible to Admins Only	This feature extends External Collaboration Management to support the NCR, Audit, Change Control, and Inspection objects.
	QualityOne	HVO Migration Preparation: Inspection Sample Test Result Object	Medium	Auto-on	Visible to Admins Only	This feature updates the Inspection Sample Test Result object to be compatible with the migration requirements needed for the High Volume object (HVO) conversion.
	QualityOne	Automated Email Intake for Certificate of Analysis (COAs)	Medium	Configuration	Visible to Admins Only	This feature allows assigned External Collaborators, to submit a Certificate of Analysis (COA) document by email for a COA Inspection record.
	QualityOne	Deep Copying HACCP Plans: Entry & User Action	Medium	Configuration	Visible to Admins Only	This feature allows users to create a copy of HACCP Plan and all the related records using an object action to create a new HACCP Plan. This object action is available as a user action and an entry action.
	QualityOne	Populating HACCP Plans with Hazard Analysis Details: Entry & User Action	Medium	Configuration	Visible to Admins Only	This feature allows users to automatically populate HACCP Plan details such as a list of ingredients, process steps, and their related hazard analysis records using an object action. This object action is available as a user action and an entry action.
	QualityOne	Risk Management Framework for HAZOP & FMEA	Medium	Configuration	Visible to Admins Only	This feature allows customers to model HAZOP (Hazard and Operability Study) and P-FMEA (Process Failure Mode & Effects Analysis) risk studies within Vault. Users can perform HAZOP and P-FMEA risk assessments and create new custom Risk Study records or create from an existing Risk Study record.

	QualityOne	Linking Complaint, NCR, CAR, CII & Change Control to Material	Low	Auto-on	Visible to Admins Only	This feature allows users to reference Material when creating Complaint, NCR, CAR, CII, and Change Control records.
	QualityOne	COA Inspection Enhancements	Medium	Auto-on	Visible to All Users	This feature introduces a number of smaller enhancements to improve the UX and overall ingestion accuracy.
	QualityOne	FSVP: Including Hazards on the Review & Completed Checklist Page	Low	Auto-on	Visible to All Users	This feature enhances the existing Material Verification checklist by displaying the list of hazards on the checklist review and completed page, and the Material label, if configured, at the beginning of the checklist design title as a reference in the checklist respondent UI.
	QualityOne	SVO to HVO Migration: Purchase Order Line Item Object	Medium	Auto-on	None	This feature migrates the Purchase Order Line Item standard Vault object (SVO) to a High Volume object (HVO).

CP&C	Application	Feature Name	GxP Risk	Enablement	Default Impact	Description
	RegulatoryOne Regulatory Documents	Regulatory Study Object Data Model to Support Endpoint Studies	Medium	Configuration	Visible to Admins Only	This feature adds the standard Regulatory Study object, allowing organizations to capture endpoint study details and conclusions.
	RegulatoryOne Registration & Dossier Management	Export Dossier Binder	Medium	Configuration	Visible to Admins Only	This feature allows users to export the binder of a Registration Item Requirement record into a downloadable ZIP file.
	RegulatoryOne Registration & Dossier Management	Propagate Fields from Registration Items to Registration & Registration Objective	Medium	Configuration	Visible to Admins Only	This feature allows Admins to configure the automatic population of fields on Registration records from related Registration Item records.
	RegulatoryOne Registration & Dossier Management	Root Requirement Selection from Registration Item	Low	Configuration	Visible to Admins Only	This feature allows users to select root Requirements when they run the Generate Requirements user action on a Registration Item record.
	RegulatoryOne Registration & Dossier Management	Relational Token Error Handling	N/A	Auto-on	Visible to Admins Only	This feature adds details about token resolution, including any errors that occurred, to the job logs for the Generate Requirements for Registration Item, Generate Requirements for Registration Objective, and Split Registration Item actions.
	RegulatoryOne Compliance Management	Import Formulation Questionnaires	High	Configuration	Visible to Admins Only	This feature automates the creation of Compliance Assessment records by allowing users to import responses to completed formulation questionnaire data via pre-configured mappings.
	RegulatoryOne Compliance Management	Regulatory Request Management Enhancements	Medium	Configuration	Visible to Admins Only	This feature enhances configuration options on the Regulatory Request object page layout by improving error messages on the Similiar Requests section and allowing Criteria VQL on the Formulation field.

CP&C	Application	Feature Name	GxP Risk	Enablement	Default Impact	Description
	Veeva Claims	Bulk Add Claim Comments	Medium	Configuration	Visible to Admins Only	This feature allows users to add a Claim Comment to multiple Claims with a single action.
	Veeva Claims	Bulk Add Project Comments	Medium	Configuration	Visible to Admins Only	This feature allows users to add a Project Comment to multiple Projects with a single action.
	Veeva Claims	Bulk Add Substantiation	Medium	Configuration	Visible to Admins Only	This feature allows users to add a single Substantiation to multiple Claims with a single action.
	Veeva Claims	Enhanced Configurability for the Claim Project Join Object	Medium	Configuration	Visible to Admins Only	This enhancement allows Admins to enable the Allow hierarchical copy attribute on the Claim object reference field on the Claim Project Join object so that when users copy Claim records, they have the option to also copy related Project records.
	Veeva Claims	Remove Statement & Associated Records from Project	Medium	Configuration	Visible to Admins Only	This feature allows users to remove Statements, Claims, and Local Adaptations from a Project in bulk.
	Veeva Claims	Selective Local Adaptation Creation from a Project Enhancement	Low	Configuration	Visible to Admins Only	This enhancement enables organizations to exclude specific Claim records when generating Local Adaptations from a Project.

Change Log

This feature list is subject to change prior to the 22R2 release. Change tracking is effective as of June 13th, 2022.

Date	Change	Impact
05 Jul 2022	Added link to the 22R2 release notes.	The RIA now includes a link to the 22R2 release notes.
13 Jun 2022	Initial RIA published	N/A
